

I CLAIM:

1. An apparatus for converting the load compartment of a vehicle into a tank for carrying liquids, wherein the load compartment has an upper edge defining an upper opening, the apparatus comprising:
- 5 a removable cover assembly configured to engage said upper edge and cover the upper opening of the load compartment; and
- a discharge conduit coupled to the cover assembly through which liquid contained in the load compartment can be removed.
- 10 2. The apparatus of claim 1 further comprising at least one latch mechanism for releasably latching the cover assembly to the load compartment.
3. The apparatus of claim 1, wherein the load compartment is a dumping hopper.
- 15 4. The apparatus of claim 1 further comprising a sealing member for positioning between the load compartment upper edge and the cover assembly.
5. The apparatus of claim 1 further comprising a pump carried by the cover assembly and having an inlet and an outlet, the outlet of the pump being fluidly connected to the discharge conduit, the pump configured to discharge liquid contained in the load compartment through the discharge conduit.
- 20 6. The apparatus of claim 5, wherein the discharge conduit extends at least partially inside the cover assembly.
7. The apparatus of claim 1, wherein the cover assembly defines an opening for introducing liquid into the load compartment.
- 30 8. The apparatus of claim 1, wherein the cover assembly has a top wall and a portion of the discharge conduit extends in a plane that is substantially parallel to the top wall of the cover assembly.

2002-01-17 10:50:00

9. An apparatus for converting the load compartment of a vehicle into a tank for containing liquids, wherein the load compartment has an upper edge defining an upper opening, the apparatus comprising:

- 5 a cover adapted to engage said upper edge and cover the upper opening for retaining liquid contained in the load compartment; and
a pump carried by the cover for discharging liquid contained in the load compartment.

10. The apparatus of claim 9, wherein the cover has a top wall with an upper and
10 lower major surface and the apparatus further comprises a discharge manifold supported proximate the lower major surface of the top wall.

11. The apparatus of claim 9 further comprising at least one latch assembly for
releasably latching the cover to the load compartment.

15 12. The apparatus of claim 9, wherein the cover defines openings adapted to receive the forks of a forklift.

13. An apparatus for converting the load compartment of a vehicle into a tank for
20 containing liquids, wherein the load compartment defines an upper opening, the apparatus comprising:

- a removable cover assembly configured to cover the upper opening of the load compartment, the cover assembly having at least one latch mechanism for releasably latching the cover assembly to the load compartment;
25 a pump carried by the cover assembly for removing liquid contained in the load compartment; and
a discharge conduit having a first end in fluid communication with an outlet of the pump and a second end positioned to discharge liquid from the load compartment.

30 14. The apparatus of claim 13, wherein the discharge conduit has a portion that extends within the interior space of the cover assembly.

20250509-04302

15. The apparatus of claim 13 further comprising a back-flow preventer and an inlet conduit having a first end fluidly connected the back-flow preventer and a second end fluidly connected to an inlet of the pump.

5 16. An apparatus for converting the load compartment of a vehicle into a tank for containing liquids, wherein the load compartment defines an upper opening, the apparatus comprising:

means for covering the upper opening for retaining liquid contained in the load compartment; and

10 means for removing liquid contained in the load compartment.

17. The apparatus of claim 16, wherein the means for covering the upper opening of the load compartment is configured to form a liquid-tight seal with the load compartment.

15 18. The apparatus of claim 16, wherein the means for covering the upper opening of the load compartment is releasably latchable to the load compartment.

N 19. An apparatus for converting the load compartment of a vehicle into a tank for containing liquids, the apparatus comprising:
20 a container for holding liquids configured to fit within the load compartment;
a pump for removing liquid from the container, the pump having an inlet and an outlet;
and

a discharge conduit fluidly connected to the outlet of the pump and extending at least partially through the inside of the container.

25 20. The apparatus of claim 19, wherein the container has a top wall and the discharge conduit comprises a discharge manifold supported inside of the container proximate the top wall.

30 21. The apparatus of claim 19, wherein the pump comprises a submersible pump disposed inside the container.

20052859-017001

22. An apparatus for converting the dumping hopper of a loader into a tank for carrying liquids, wherein the hopper defines an upper opening, the apparatus comprising:
a removable cover assembly for covering the upper opening of the hopper; and
wherein when the cover assembly is positioned to cover the upper opening, a
5 substantially liquid-tight seal is formed between the cover assembly and the hopper.

23. The apparatus of claim 22, wherein the cover assembly is configured to be releasably latchable to the hopper.

10 24. The apparatus of claim 22, further comprising a pump carried by the cover assembly for discharging liquid from the hopper, the pump having an inlet and an outlet.

25. The apparatus of claim 24 further comprising an inlet conduit and an outlet conduit, the inlet conduit having a first, inlet end and a second end fluidly connected to the inlet
15 of the pump, and the outlet conduit having a first end fluidly connected to the outlet of the pump and a second end positioned to discharge liquid from the hopper.

26. The apparatus of claim 22 further comprising support legs for supporting the cover assembly in a substantially horizontal position when the cover assembly is removed from
20 the hopper.

27. A method for carrying liquid in an open-top load container of a vehicle, the method comprising:

covering the open top of the load container with a cover so that a substantially liquid-
25 tight seal is formed between the cover and the load container; and
introducing a liquid into the load container through an opening in the cover.

28. The method of claim 27 further comprising removing liquid from the load container with a pump.

30

30. The method of claim 27, wherein covering the open top of the load container further comprises latching a cover to the load container.
